

📌 Current Position

Status: Student
Existing Skills:
Web Development Data Analysis

Profile: Technically grounded student with a dual foundation in building products (web dev) and interpreting data — a strong, employable combination if sharpened and shown through real projects.

🎯 Target Goal

Objective: Land a Job / Internship
Timeline: 3 Months (Aggressive Sprint)
Fastest Path: Position as a **Data Analyst / Junior Full-Stack + Data role** — leverage existing web dev + data analysis combo rather than starting a brand-new specialization from zero.

📊 Skill Gap Analysis

Skill Area	Current Level	Required for Goal	Gap
Web Development (HTML/CSS/JS)	Working knowledge	Portfolio-ready projects	Low
Data Analysis (Excel/SQL/Pandas)	Basic-Intermediate	SQL + Python fluency, dashboards	Medium
Git/GitHub & Deployment	Minimal	Confident daily use	High
Resume/LinkedIn/Interview Skills	Undeveloped	Recruiter-ready	High
Communication & Networking	Passive	Active outreach habit	Medium

📅 Learning Plan

Month	Focus
Month 1	SQL basics, Python (Pandas), Git/GitHub fundamentals
Month 2	Data visualization (Power BI/Tableau), React/API integration, deploy 1 web app
Month 3	Mock interviews, DSA basics, resume + LinkedIn polish, applications

🏠 Suggested Projects

#	Project
1	Full-stack web app with a live data dashboard (e.g. expense tracker + analytics)
2	SQL + Python analysis of a public dataset, published on GitHub with insights write-up
3	Personal portfolio site showcasing both dev + analytics work, deployed live

🌐 Networking Strategy

Channel	Action
LinkedIn	Optimize profile; post 1x/week on project progress; comment on hiring managers' posts
College/Alumni Network	Reach out to 5 alumni/week in target roles for informational chats
Communities	Join 2 active Discord/Slack groups (web dev + data) for referrals & feedback
Direct Outreach	Cold-message 10 recruiters/hiring managers weekly starting Month 2

📅 Monthly Milestones

Month 1 — Foundation - SQL + Python basics done - GitHub set up & active - Resume draft v1
Month 2 — Build & Show 2 projects deployed live - Portfolio site launched - LinkedIn optimized + posting
Month 3 — Launch & Apply 30+ applications sent 5+ mock interviews done - Active referral pipeline

⚡ Immediate Next Actions (This Week)

- Create/clean up GitHub + LinkedIn profiles today
- Start a free SQL course (e.g. Mode/SQLZoo) — 30 min/day
- Pick Project #1 and scaffold the repo
- Message 3 alumni or seniors in data/dev roles this week
